Appl. No. : 10/789,859

Filed: February 27, 2004

#### 1. AMENDMENTS TO THE CLAIMS

Please cancel Claims 30-39.

### (Currently Amended) A personal table comprising:

a table top constructed from blow-molded plastic, the table top including a first side, a second side, an upper surface, a lower surface that is spaced apart from the upper surface, and a generally hollow interior portion that are integrally formed during the blow molding process as part of a unitary, one-piece construction; valower surface, and an upper surface that is spaced apart from the lower surface;

- a frame connected to the lower surface of the table top, the frame including a first side rail disposed on the first side of the table top and a second side rail disposed on the second side of the table top, the first side rail including at least one guide, the second side rail including at least one guide, the second side rail including at least one guide.
- a drawer including a first side wall and a second side wall, the first side wall including an outwardly extending portion that is sized and configured to contact the guide of the first side rail of the frame to allow the drawer to be slidably connected to the frame, the second side wall including an outwardly extending portion that is sized and configured to contact the guide of the second side rail of the frame to allow the drawer to be slidably connected to the frame; and
  - a single support assembly that is sized and configured to support the table top relative

Appl. No. : 10/789,859

Filed: February 27, 2004

to a support surface, be selectively connected to the leg receiving recesses of the frame, the support assembly including a first leg and a second leg that are pivotally connected, the first leg and second leg being movable between a first-position in which the first-leg and the second-leg have a generally X-shaped configuration and a second position in which the firstleg and the second-leg are in a collapsed configuration.

 (Currently Amended) The personal table as in Claim 40, wherein an upper surface of the guide of the first side rail of the financ contacts a lower surface of the outwardly extending nortion of the first side wall of the drawer; and

wherein an upper surface of the guide of the second side rail of the frame contacts a lower surface of the outwardly extending portion of the second side wall of the drawer, further comprising at least two pairs of leg receiving recesses formed in the table top, the first leg including an upper portion that is sized and configured to be selectively received within one of the pairs of leg receiving recesses in the frame and the table top, and the second leg including an upper portion that is sized and configured to be selectively received within another of the pairs of the leg receiving recesses in the frame and the table top.

Please cancel Claims 42 and 43.

: 10/789,859 Appl. No.

Filed : February 27, 2004

(Currently Amended) The personal table as in Claim 40, further comprising a first opening integrally formed in a generally downwardly extending lip of formed in the table top, the first opening being sized and configured to receive at least a portion of the single support assembly; and

further comprising a second opening integrally formed in the generally downwardly extending lip of the table top, the second opening being sized and configured to receive at least a portion of the drawer, first leg and the second leg when the first leg and second leg are in a collapsed position.

- 45 (Currently Amended) The personal table as in Claim 40, wherein the first leg includes an elongated body portion and the second leg includes an elongated body portion, the elongated body portion of the first leg and the elongated body portion of the second leg being offset towards an edge of the table top when the first leg and the second leg are attached to the table top.
- 46 (Currently Amended) The personal table as in Claim 40, wherein the further comprising at least one guide of the first side rail of the frame includes a plurality of rollers; and

wherein the at least one guide of the second side rail of the frame including a plurality of rollers, member formed in the lower surface of the table top, the guide member being sized and configured to assist in connecting the support assembly to the table top.

Appl. No. : 10/789,859

Filed : February 27, 2004

Please cancel Claims 47 and 48.

49. (Currently Amended) The personal table as in Claim 40, wherein the first leg of the

single support assembly includes a body portion with one or more elongated support members; and

wherein the second leg includes a body portion with one or more elongated support members.

(Currently Amended) The personal table as in Claim 40, 49; wherein the pair of leas

of the single leg assembly includes a first leg includes with a body portion having one or more

elongated members and the a second leg includes with a body portion having one or more elongated

members.

Please cancel Claims 51-57.

(Currently Amended) A personal table that is sized and configured to be used by a

single person and the table being adjustable in height relative to a support surface, the personal table

comprising:

a plastic table top including an upper surface, a lower surface that is spaced apart

from the upper surface, and a side wall;

a frame connected to the table top, the frame including a first side rail disposed on a

first side of the table top and a second side rail disposed on a second side of the table top, the

Page 5 of 25

Appl. No. : 10/789,859 Filed : February 27, 2004

first side rail including at least one guide and the second side rail including at least one guide;

a drawer including a first side wall with an outwardly extending portion that is sized and configured to contact the guide of the first side rail to allow the drawer to be slidably connected to the lower surface of the table top, the drawing including a second side wall with an outwardly extending portion that is sized and configured to contact the guide of the second side rail to allow the drawer to be slidably connected to the table tor:

a single leg assembly that is selectively connected to the table top, the leg assembly including legs that are pivotally connected in a generally X-shaped configuration; the legs being selectively-movable between an extended position and a collapsed position; and

a first an opening in the side wall of the table top that is sized and configured to receive at least a portion of the single leg assembly; and allow at least a portion of the leg assembly to extend through the opening when the legs are in the collapsed position.

a second opening in the side wall of the table top that is sized and configured to receive at least a portion of the drawer.

 (Currently Amended) The personal table as in Claim 58, wherein the <u>first</u> opening <u>is</u> sized and configured to allow allows the legs to be disposed generally parallel and adjacent to the lower surface of the table top, when the legs are in the collapsed position.

Appl. No. : 10/789,859 Filed : February 27, 2004

60. (Currently Amended) The personal table as in Claim 58, wherein the <u>first</u> opening is sized and configured to facilitate stacking of the table by allowing the legs to be positioned generally narallel and adjacent to the lower surface of the table too. when the legs are in the collapsed position.

# Please cancel Claim 61.

 (Currently Amended) The personal table as in Claim 58, wherein both of the legs are selectively connected to the table top to allow the height of the table to be adjusted.

## Please cancel Claim 63.

### Please add the following new claims:

65. (New) The table as in Claim 40, wherein the at least one guide of the first side rail includes a plurality of rollers attached to an inner surface of the first side rail; and

wherein the at least one guide of the second side rail includes a plurality of rollers attached to an inner surface of the second side rail.

 (New) The table as in Claim 40, wherein the outwardly extending portion of the first side wall of the drawer comprises a flange; and

Appl. No. : 10/789,859

Filed : February 27, 2004

wherein the outwardly extending portion of the second side wall of the drawer comprises a flange.

67. (New) The table as in Claim 40, wherein the outwardly extending portion of the first side wall of the drawer comprises a flange and a generally downwardly extending portion, the first side wall, the flange and the generally downwardly extending portion having a generally C-shaped conflowration; and

wherein the outwardly extending portion of the second side wall of the drawer comprises a flange and a generally downwardly extending portion, the second side wall, the flange and the generally downwardly extending portion having a generally C-shaped configuration.

68. (New) The table as in Claim 40, further comprising a first projection extending downwardly from the lower surface of the table top, the first projection being sized and configured to help secure the drawer in a closed position, the first projection being integrally formed with the table top as part of the unitary, one-piece construction; and

further comprising a second projection extending downwardly from the lower surface of the table top, the second projection being sized and configured to help prevent the drawer from being inadvertently removed from the table top, the second projection being integrally formed with the table ton as part of the unitary, one-piece construction.

Appl. No. : 10/789,859

Filed: February 27, 2004

69. (New) The table as in Claim 40, further comprising a projection that extends downwardly from the lower surface of the table top, the projection being sized and configured to help secure the drawer in a closed position, the projection being integrally formed with the table top as part of the unitary, one-piece construction.

70. (New) The table as in Claim 40, further comprising a projection that extends downwardly from the lower surface of the table top, the projection being sized and configured to help prevent the drawer from being inadvertently removed from the table top, the projection being integrally formed with the table top as part of the unitary, one-piece construction.

(New) The table as in Claim 58, wherein the at least one guide of the first side rail
includes a plurality of rollers attached to an inner surface of the first side rail; and

wherein the at least one guide of the second side rail includes a plurality of rollers attached to an inner surface of the second side rail.

 (New) The table as in Claim 58, wherein the outwardly extending portion of the first side wall of the drawer comprises a flange; and

wherein the outwardly extending portion of the second side wall of the drawer comprises a flange.

Appl. No. : 10/789,859

Filed : February 27, 2004

73. (New) The table as in Claim 58, wherein the outwardly extending portion of the first side wall of the drawer comprises a flange and a generally downwardly extending portion, the first side wall, the flange and the generally downwardly extending portion having a generally C-shaped configuration: and

wherein the outwardly extending portion of the second side wall of the drawer comprises a flange and a generally downwardly extending portion, the second side wall, the flange and the senerally downwardly extending portion having a generally C-shaped configuration.

74. (New) The table as in Claim 58, further comprising a first projection extending downwardly from the lower surface of the table top, the first projection being sized and configured to help secure the drawer in a closed position, the first projection being integrally formed with the table too as part of the unitary, one-piece construction; and

further comprising a second projection extending downwardly from the lower surface of the table top, the second projection being sized and configured to help prevent the drawer from being inadvertently removed from the table top, the second projection being integrally formed with the table top as part of the unitary, one-piece construction.

75. (New) The table as in Claim 58, further comprising a projection that extends downwardly from the lower surface of the table top, the projection being sized and configured to help secure the drawer in a closed position, the projection being integrally formed with the table top as

Appl. No. : 10/789,859

Filed : February 27, 2004

as part of the unitary, one-piece construction.

(New) The table as in Claim 58, further comprising a projection that extends
downwardly from the lower surface of the table top, the projection being sized and configured to help

do namaly nom de to net surface of the more top, the projection or might be seen a series

prevent the drawer from being inadvertently removed from the table top, the projection being integrally formed with the table top as part of the unitary, one-piece construction.

(New) A personal table that is intended to be used by a single user, the personal table

comprising:

a table top constructed from blow-molded plastic, the table top including a first side, a

second side, an upper surface, a lower surface, a hollow interior portion at least partially disposed between the upper surface and the lower surface, and a downwardly extending lip

that are integrally formed during the blow-molding process as part of a unitary, one-piece

construction:

a frame connected to the table top, the frame including a first side rail disposed on the

first side of the table top and a second side rail disposed on the second side of the table top;

a first plurality of guides extending inwardly from the first side rail of the frame;

a second plurality of guides extending inwardly from the second side rail of the frame;

an opening integrally formed in the downwardly extending lip as part of the unitary,

Appl. No. : 10/789,859

Filed : February 27, 2004

one-piece construction;

a drawer at least partially disposed within the opening in the lip, the drawer including a first side wall and a second side wall, the first side wall including an outwardly extending flange that is sized and configured to contact the first plurality of guides to facilitate opening and closing of the drawer, the second side wall including an outwardly extending flange that is sized and configured to contact the second plurality of guides to facilitate opening and closing of the drawer, and

a single support assembly that is sized and configured to support the table top, the single support assembly including a first leg and a second leg that are pivotally connected.

 (New) A personal table that is intended to be used by a single user, the personal table comprising:

a table top constructed from blow-molded plastic, the table top including a first side, a second side, an upper surface, a lower surface, a hollow interior portion at least partially disposed between the upper surface and the lower surface, and a downwardly extending lip that are integrally formed during the blow-molding process as part of a unitary, one-piece construction;

a frame connected to the table top, the frame including a first side rail disposed on the first side of the table top and a second side rail disposed on the second side of the table top, the first side rail including an upwardly extending portion that forms at least a portion of a

Appl. No. : 10/789,859

Filed : February 27, 2004

first guide, the second side rail including an upwardly extending portion that forms at least a portion of a second guide;

an opening integrally formed in the downwardly extending lip as part of the unitary, one-piece construction;

- a drawer at least partially disposed within the opening in the lip, the drawer including a first side wall and a second side wall, the first side wall including an outwardly extending flange that is sized and configured to contact the first guide of the first side rail of the frame to facilitate opening and closing of the drawer, the second side wall including an outwardly extending flange that is sized and configured to contact the second guide of the second side rail of the frame to facilitate opening and closing of the drawer; and
- a single support assembly that is sized and configured to support the table top, the single support assembly including a first leg and a second leg that are pivotally connected.
